SUMMARY

Fourth-year Bachelor of Cybersecurity and Networks student, expected to graduate in February 2027, and a junior penetration-testing practitioner with independent security-testing experience and six weeks of PixelMind field training. Practical evidence includes a 90-page internal-network assessment report, CEHv13 coursework, Cisco networking and Oracle Cloud credentials, and nine public GitHub repositories. Focused on ethical hacking, network security, secure software, AI/ML security, and cyber threat intelligence.

EDUCATION

Jan 2023 - Feb 2027
Sana'a, Yemen

Bachelor of Cybersecurity and Networks, University of Science and Technology, Yemen
Practical coursework and evidence-based projects in ethical hacking, routing and switching, network defense, secure software, cryptography, digital forensics, cloud computing, AI/ML, and cyber threat intelligence.

PROFESSIONAL EXPERIENCE

2026 | 6 weeks
PixelMind, Sana'a

Cybersecurity Field Trainee, PixelMind

- Performed authorized reconnaissance and vulnerability assessment using Nmap, Nuclei, DNS/subdomain enumeration, content discovery, Wireshark, and Active Directory review.
- Researched SSRF, CSRF, CVEs, Confluence RCE, and a controlled VMware Horizon/Log4j scenario, translating technical evidence into risk and remediation.
- Produced weekly reports and a 90-page confidential internal-network assessment report while keeping infrastructure identifiers, accounts, packet captures, and exploit details private.

Jan 2024 - May 2025
Remote, Yemen

Independent Penetration Tester

- Completed authorized lab assessments across web and network security, Linux and Python workflows, and DC-1, DC-2, and DC-3 vulnerable-machine environments.
- Documented scope, reconnaissance, vulnerability evidence, severity, impact, and remediation in privacy-safe technical reports.

2026 - Present
Graduation project

AI and Cyber Threat Intelligence Engineer, CTI Tool

- Developing a modular CTI pipeline for cleaning, relevance classification, IoC extraction, named-entity recognition, relation extraction, validation, and structured reporting.
- Separates offline DNRTI model work from runtime threat-data processing and maintains focused tests and architecture documentation.

2025 - 2026
Security projects

Secure Software and Security Engineering Developer

- Built ProfileGuard Secure, SecureVault AES, Employee QR Register, an AI firewall-rule optimizer, and SocialGuard fake-profile detection.
- Applied secure authentication, RBAC, CSRF protection, rate limiting, AES-256-GCM, signed QR tokens, privacy controls, testing, and technical reporting.

CERTIFICATES

Security and Networking

- CEHv13 - Complete Series, EC-Council (Mar 2026), Credential 787249
- Enterprise Networking, Security, and Automation, Cisco (Nov 2025)
- Switching, Routing, and Wireless Essentials, Cisco (Sep 2025)
- CCNAv7: Introduction to Networks, Cisco (Apr 2024)

Cloud and Cybersecurity

- OCI 2025 Certified AI Foundations Associate (Oct 2025 - Oct 2027)
- OCI 2025 Certified Foundations Associate (Oct 2025 - Oct 2027)
- Introduction to Cybersecurity, Cisco Networking Academy (Apr 2025)
- PixelMind Cybersecurity Field Training Certificate (2026)

TRAINING AND PARTICIPATION

- Six-week PixelMind field training: reconnaissance, vulnerability assessment, CVE research, reporting, and internal-network security assessment (2026)
- Cybersecurity in the Banking and Financial Sector training program, CAC Bank (2025)
- How to Protect Yourself in the Digital World awareness workshop, Cyber Security Nexus, 28-30 July 2025
- Students' Artifacts 2025 annual course-project exhibition, University of Science and Technology

SKILLS

Technical Skill

- Penetration testing, vulnerability assessment, and risk rating
- Nmap, Nuclei, Wireshark, reconnaissance, and CVE research
- Active Directory, DNS, GPO, pfSense, Suricata, and Splunk
- Routing, switching, VLANs, OSPF, ACLs, NAT/PAT, SSH, port security
- Python, Flask, Linux, Java, Git, and REST APIs
- Secure development: bcrypt, RBAC, CSRF, encryption, audit logs
- AES-256-GCM, PBKDF2, signed QR tokens, and privacy controls
- CTI, NLP/AI, IoC/NER extraction, ML evaluation, and OCI

Soft Skill

- Evidence-based security reporting and technical writing
- Risk, impact, remediation, and defense-in-depth planning
- Privacy-aware sanitization and responsible disclosure
- Technical research, requirements analysis, and validation
- Project planning, risk matrices, schedules, and documentation
- Team leadership and infrastructure ownership
- Structured troubleshooting and attention to detail
- Arabic communication and technical English

ACHIEVEMENTS

2025 - 2026
UST / PixelMind

Evidence-Based Cybersecurity Work

- Produced a 90-page confidential internal-network assessment report and presented course projects at Students' Artifacts 2025.

PROJECTS

CTI Tool and AI Firewall Rule Optimizer

- Built security-analysis workflows for CTI classification, IoC/NER/relation extraction, and genetic-algorithm firewall-rule ordering with comparison metrics and PDF reporting.

PixelMind Internal Network Security Assessment

- Applied Nmap, Nuclei, Wireshark, web/CVE research, and Active Directory review, then documented scope, findings, risk, impact, and remediation in a sanitized case study.

NajmTech Enterprise Security Lab

- Led infrastructure work for an enterprise lab using Active Directory, DNS, GPO hardening, pfSense, Suricata IDS, Splunk monitoring, IIS, permissions, and security testing.

ProfileGuard Secure, SecureVault AES, and Employee QR Register

- Engineered secure applications with RBAC, CSRF protection, rate limiting, encrypted fields, AES-256-GCM/PBKDF2, signed QR tokens, local privacy controls, and security tests.

SocialGuard AI - Fake Profile Detection

- Compared six ML classifiers with privacy-aware feature engineering; the documented SVM result reached 97.7% test accuracy, 95.5% F1, and a 0.9% generalization gap.

Network Architecture, Hardening, and Honeynet Research

- Designed a Cisco Packet Tracer hotel network with VLANs, OSPF, DHCP, ACLs, NAT/PAT, SSH, and port security; also authored an IEEE-aligned hardening plan and multi-layer honeynet proposal.

LANGUAGES

• Arabic - Native

• English - Technical working proficiency
