Ammar Aikan

Sana'a, Yemen | 202310101030@student.ust.edu.ye | LinkedIn | GitHub | Portfolio

SUMMARY

Cybersecurity practitioner with six weeks of field training at PixelMind. Analyzed internal network and web assessment evidence, reviewed Active Directory account risks, and wrote prioritized findings, remediation guidance and retest checklists. Completed ACTIT, a team graduation project for AI-assisted cyber threat intelligence, contributing to indicator classification, analyst presentation and ATT&CK, STIX and MISP workflows.

SKILLS

Cybersecurity: Network and web security assessment, penetration testing labs, vulnerability analysis, CVE research, risk and remediation.

Security Tools: Nmap, Nuclei, Burp Suite, Wireshark, Splunk, Suricata, pfSense.

Network & Infrastructure: Active Directory, Windows Server, DNS, GPO, VMware, VLANs, OSPF, ACLs, NAT/PAT, SSH, DHCP.

Systems & Development: Linux, Python, Flask, FastAPI, Java, Flutter, Git, REST APIs.

Secure Development & CTI: RBAC, CSRF protection, AES-GCM, PBKDF2, observable classification, MITRE ATT&CK, STIX, MISP.

Professional: Security reporting, evidence review, remediation planning, technical documentation, troubleshooting, team coordination.

PROFESSIONAL EXPERIENCE

Cybersecurity Field Trainee - PixelMind *Sana'a, Yemen | 2026 | 6 weeks*

- Analyzed Nmap and Nuclei outputs, service evidence and Active Directory account exports for an authorized internal network assessment, separating observed risks from scanner-only indications.
- Correlated exposed services and privileged or service-account settings with infrastructure context to prioritize risks and recommend practical hardening steps.
- Prepared a separate Confluence assessment for CVE-2022-26134, documenting supplied validation evidence, impact, containment, patching and retest criteria.
- Practiced reconnaissance, DNS and endpoint enumeration, and web security testing through controlled SSRF, CSRF, XSS and file-upload exercises.
- Delivered technical reports with executive summaries, severity ratings, supporting evidence, remediation priorities and retest checklists.

PROJECTS

ACTIT — AI-Based Cyber Threat Intelligence

https://github.com/AmmarAikan/ACTIT-Platform

University of Science and Technology, Yemen

- Completed a team graduation project that processes threat data, extracts observables and supports analyst review and structured sharing.
- Contributed to observable classification and indicator presentation so analysts could interpret and review extracted indicators.
- Contributed to MITRE ATT&CK mapping and STIX/MISP workflows in a FastAPI, React and PostgreSQL application.
- Documented implementation and evaluation limits, including the distinction between experimental results and production performance .

NajmTech Enterprise Security Lab

University of Science and Technology, Yemen

- Led a team VMware lab and handled Active Directory, DNS and Splunk infrastructure work.
- Configured Windows Server identity services and Group Policy in a controlled enterprise network lab.
- Coordinated pfSense and Suricata integration and documented working configuration and log ingestion alongside unresolved checks.
- Reviewed service access, host configurations and collected events to explain defensive controls and verification limits.

Secure Hotel Enterprise Network

University of Science and Technology, Yemen

- Designed a multi-floor Packet Tracer network using VLAN segmentation, OSPF, DHCP, ACLs, NAT/PAT and SSH.
- Configured departmental access controls and port security to limit unauthorized access between segments.
- Documented SSH login and port-security configuration evidence in the lab.
- Recorded network design, addressing and configuration decisions in the project report.

Secure Software Engineering Projects
University of Science and Technology, Yemen

- Implemented authentication, server-side role checks, protected profile fields and upload validation in ProfileGuard Secure.
- Built AES-GCM text and file encryption with PBKDF2-derived keys and authenticated containers in SecureVault AES.
- Developed CyVault, an offline Flutter vault with authenticated record encryption, wrapped vault keys and backup handling.
- Built an employee registration application with HMAC-authenticated QR tokens and safer CSV output.

API Heist — API Security Hardening

- Hardened authentication and authorization in a fork of thano-ai/api_heist, preserving upstream attribution.
- Added bounded fetching and signed webhooks to address API security risks.
- Wrote negative security regression tests and documented remediation in Arabic.

EDUCATION

University of Science and Technology, Yemen

Bachelor's program in Cybersecurity and Networks

- **Coursework:** Ethical Hacking, Network Security, Routing & Switching, Network Defense, Secure Software, Cryptography, Digital Forensics, Cloud Computing, AI/ML, and Cyber Threat Intelligence.

SELECTED TRAINING & COURSES

- EC-Council — CEH v13 Complete Series (course completion, Mar 2026)
- Enterprise Networking, Security, and Automation, Cisco (Nov 2025)
- Switching, Routing, and Wireless Essentials, Cisco (Sep 2025)
- CCNAv7: Introduction to Networks: Cisco (Apr 2024)
- Introduction to Cybersecurity: Cisco Networking Academy (Apr 2025)
- PixelMind — Cybersecurity Field Training Certificate (2026)

ACHIEVEMENTS

- **First Cybersecurity Forum — Recognized for active participation and contributed to university cybersecurity awareness material.**

LANGUAGES

- Arabic (Native)
- ***English (Technical working proficiency)***
