PROFESSIONAL SUMMARY

Early-career cybersecurity practitioner focused on penetration testing, web application security and secure development. Practical work includes security labs, assessment-evidence analysis and collaborative threat-intelligence engineering.

TECHNICAL SKILLS

Security assessment: Web application security labs, Service and CMS enumeration, Nmap, Burp Suite, Risk and remediation reporting.

Secure development: Python, Flask, FastAPI, Java, Flutter / Dart, React / TypeScript, SQL, Authentication and authorization, AES-GCM and key lifecycle.

Supporting tools and systems: Linux, Git, Docker, Active Directory labs, STIX / MISP workflows, Backup and forensic lab documentation.

FIELD TRAINING

Cybersecurity field training | PixelMind | 2026 | Six weeks

- Practiced selected web-security labs and documented reconnaissance, vulnerability research and assessment findings.
- Analyzed supplied Nmap/Nuclei and account-review evidence to prepare risk, remediation and retest documentation.

PROJECTS AND PRACTICAL LABS

API Heist - defensive hardening of an upstream API lab

- Hardened authentication and authorization and added negative security-regression tests in a fork of thano-ai/api_heist.

github.com/AmmarAikan/api_heist

ACTIT - collaborative graduation CTI platform

- Contributed to observable classification, ATT&CK/STIX/MISP workflows and indicator presentation within a team platform.
- Worked with a FastAPI/React/PostgreSQL architecture connecting threat-information processing with analyst review and controlled sharing.

github.com/AmmarAikan/ACTIT-Platform

CyVault - Flutter password vault

- Implemented an offline-first vault with authenticated record encryption, password-based key derivation, wrapped vault keys and backup handling.

github.com/AmmarAikan/cyvault-flutter

PROJECTS AND PRACTICAL LABS - CONTINUED

ProfileGuard Secure - secure-programming coursework

- Implemented authentication, server-side role checks, protected profile fields, upload validation and audit logging using Flask and SQLAlchemy.

github.com/AmmarAikan/ProfileGuard-Secure

SecureVault AES - Java desktop encryption

- Built AES-GCM text/file encryption with PBKDF2-derived keys, versioned containers and temporary-output handling for authenticated file processing.

github.com/AmmarAikan/SecureVault-AES-Java

VulnHub DC-1, DC-2 and DC-3 - practical labs

- Documented service/CMS enumeration, known-vulnerability attack chains and remediation in controlled DC-1/DC-2 labs and a team DC-3 assessment.

Veeam - paired backup and recovery lab

- Documented successful backup, controlled deletion, restore and file-content verification in a Windows lab.

Public lab report: ammaraikan.github.io/assets/reports/Veeam_Backup_and_Recovery_Lab_Public_Portfolio_Edition.pdf

EDUCATION

Studies in Cybersecurity and Networks | University of Science and Technology, Yemen

RECOGNITION

First Cybersecurity Forum - participation recognition | University of Science and Technology

LANGUAGES

Arabic: Native | English: Technical working proficiency
